

EUR Investment Grade Credit Fund

OBJECTIVES AND PROCESS

- Seeks total return, maximising investment income whilst preserving capital
- Invests at least two-thirds of its assets in investment grade euro-denominated credit debt securities
- Invests at least two-thirds of its total assets in issuers that have a proprietary overall ESGiQ score that is favourable by meeting the threshold specified in our methodology and will exclude issuers that have less favourable or those that do not have an ESGiQ score, such as sovereign issuers, cash, derivatives and investments in underlying funds
- Uses fundamental credit research combined with active top-down allocation decisions within a controlled risk framework, seeking to generate superior investment returns
- Uses a negative screen to exclude securities issued by companies based on their exposure to ESG risks
- Targets a carbon intensity that is lower than the benchmark
- May invest:
 - Up to one-third of its assets in currency-hedged non-euro-denominated debt securities and debt securities rated below investment grade
 - Up to 20% of its assets in asset-backed securities
 - In derivatives for hedging, efficient portfolio management or for investment purposes provided credit default swaps are covered

KEY RISKS

Debt securities risk: debt securities are subject to credit risk and interest rate risk and are affected by an issuer's ability to make interest payments or repay principal when due.

Asset-backed securities risk: asset-backed securities may be more sensitive to changes in interest rates and may exhibit added volatility, known as extension risk, and are subject to prepayment risk. **High yield securities risk:** high yield securities are rated below investment grade, are predominantly speculative, have a much greater risk of default and may be more volatile than higher-rated securities of similar maturity. **Derivatives risk:** the use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. The use of derivatives can lead to losses because of adverse movements in the price or value of the underlying asset, index or rate, which may be magnified by certain features of the derivatives. **ESG risk:** applying an ESG screen for security selection may result in lost opportunity in a security or industry resulting in possible underperformance relative to peers, ESG screens are dependent on third party data and errors in the data may result in the incorrect inclusion or exclusion of a security.
